GENG 400: Engineering Seminar Series

Cyber Security & Critical Infrastructures

A Lecture By

Prof. Ignacio Castillo

**Distinguished Visiting Speaker, IEEE Computer Society
Professor, Autonomous University of Mexico City**

Thursday, September 14th at 12:30 PM
Nahyan Auditorium

Cyber Security and Critical Infrastructures

Today most of the services we use are Internet based. Information Cyber security threats put physical and virtual goods of people, institutions and organizations at risk. So, countries having their critical infrastructures connected to internet are very vulnerable, including SCADA systems. Embedded security by design, security and privacy in post Snowden Age are also important topics.

Participants could obtain a wide approach about Cyber Security from academic and industrial point of view, and how the IEEE Cyber Security initiative is integrated.
