<p>The BS program in Mechanical Engineering (AERONAUTICAL SPECIALTY) does not offer any elective course.</p> <p>It is highly advisable that mechanical engineering students (Aeronautical specialty) take CIVE 201 prior to MECH 221, and MECH 232 prior to MECH 243.</p>					

## COURSE DESCRIPTIONS

### **AERO 211 AIRCRAFT BASIC SCIENCE**

**3.0: 3 cr. E**

This course provides students with an introductory treatment of the aerodynamic theory of aircraft, including flight dynamics, basic design issues, instrumentation in addition to important maintenance requirements and regulations.

### **AERO 221 AIRFRAME WORKSHOP**

**0.3: 1 cr. E**

This course introduces students to the basic workshop practices involved in handling airframes. Working with hand tools, machine tools and special tools appropriate to aircraft is emphasized in addition to introducing them some elementary manufacturing techniques.

Pre-requisite: AERO 221

### **AERO 231 AIRCRAFT DYNAMICS AND CONTROL**

**3.0: 3 cr. E**

This course covers the concepts of classical mechanics with the aerodynamic conclusions and derivations applied flying objects, range and endurance derivations for different types of aircraft, rates of climb, landing, best speeds for climb and speeds for best angle of climb, special performance problems, mechanics of some maneuvering operations, introduction to concepts of stability and control.

Pre-requisite: AERO 232

### **AERO 232 AERODYNAMICS OF FLIGHT**

**3.0: 3 cr. E**

This course presents the science of aerodynamics and its impact on aerial flight. The Standard Atmosphere and the definitions of Altitude (Geopotential, Geometric, Pressure, Temperature & Density). Conservation Equations and their applications in the modeling and measurement of incompressible and compressible flows. Wind Tunnels. Airfoils and wings and their pertinent aerodynamic parameters. High Lift devices. Aerodynamics of cylinders and spheres. Impact of aerodynamics on airplane performance.

Pre-requisite: AERO 211

Co-requisite: MECH 243

### **AERO 234 FUNDAMENTALS OF AIRCRAFT STRUCTURES**

**3.0: 3 cr. E**

This course aims to provide fundamentals of Structural System, Load classification, Basic Flight Loading Conditions, Flight Vehicle Aerodynamic Loads, Flight Vehicle Inertia Loads, Load Factors for Translational Acceleration, Velocity-Load Factor Diagram, Gust Load Factors, Stresses, Stress Equilibrium Equations, Strains and Strain-Displacement Relationships, Compatibility Equations for Plane Stress, Stress-Strain Relationships, Mechanical Properties of Materials, Fatigue, Strength-Weight Comparisons of Materials, Sandwich Construction, Force-Stress Relationships, Normal Stresses in Beams, Shear Stresses in Beams, Shear Center, Torsion of Closed-Section Box Beams, Work and Complementary Work, Strain and Complementary Energies, Principle of Virtual Displacements, Principle of Virtual Forces, Redundant Structures and the Unit-Load Method.

Pre-requisite: AERO 211, MECH 221

Co-requisite: CIVE 202

**AERO 244 AERO-ENGINES WORKSHOP****0.3: 1 cr. E**

This course deals with engine constructions, identification of engine parts, assembly and disassembly of piston and gas-turbine power plants, engine installation, preservation and storage.

**AERO 245 AIRCRAFT INSTRUMENTS AND SYSTEMS****3.0: 3 cr. E**

This course introduces the concepts of flight control systems, navigation instruments, engine control systems, fuel systems, hydraulic systems, pneumatic systems, mechanical and hydraulic systems, propulsion control systems, radar radio aids, cockpit displays, guidance and communication systems

Pre-requisite: AERO 211

**AERO 316 FUNDAMENTALS OF AIRCRAFT DESIGN****3.0: 3 cr. E**

This course introduces the phases of Aircraft Design (Conceptual, Preliminary, Detail), Aircraft Conceptual Design Process, Empty Weight Estimation, Fuel Fraction Estimation, Mission Profiles, Lift to Drag ratio Estimation, Takeoff Weight Calculation, Airfoil Selection, Wing Geometry (Aspect Ratio, Wing Sweep, Taper Ratio, Twist, Wing Incidence, Dihedral, Wing vertical location, Wing Tips), Biplane Wings, Tail Geometry and Arrangement-Tail Functions, Passenger Preferences, Passenger cabin layout, Fuselage Geometry, Airworthiness, Systems, Thrust-to-Weight Ratio, Power Loading and Horsepower-To-Weight, Statistical Estimation of T/W, Thrust Matching, Wing Loading, Stall Speed, Takeoff Distance, Catapult Takeoff, Landing Distance, Wing Loading, Tail Volume Coefficient, Control Surface Sizing, Configuration Layout & Loft, Aerodynamic considerations, Structural considerations, Radar detectability, Special Considerations, Propulsion Selection, Jet-Engine Integration, Propeller-Engine Integration, Fuel System, Landing Gear Arrangements, Tire Sizing, Shock Absorbers, Castoring-Wheel Geometry, Gear-Retract Geometry, Seaplanes, Subsystems.

Pre-requisites: AERO 232, AERO 234, GENG 221, GENG 222

MECH 290Co-requisite: MECH 387

**AERO 343 Helicopter Fundamentals****3.0: 3 cr. E**

The objectives of this course are to provide an introductory treatment of the aerodynamic theory of rotary wing aircraft, including basic performance, control, and basic rotor dynamics, history of helicopter flight, fundamentals of rotor aerodynamics, momentum theory blade element analysis, and basic helicopter performance.

Pre-requisites: AERO 211, MECH 221

**AERO 344 AIRCRAFT PROPULSION SYSTEMS****3.0: 3 cr. E**

This course covers basic principles of aircraft propulsion. Basic theory of thrust generation, Differences between propeller and jet driven aircraft. Piston engines and propeller power-plants as used on light aircraft, Gas Turbine engines of the various types. Of particular importance is the thermodynamics performance analyses as well as thrust calculations for the different engines.

Pre-requisites: MECH 232

**AERO 346 SAFETY MANAGEMENT SYSTEMS****3.0: 3 cr. E**

This course introduces the students to the basic concepts of safety and the modern approach to safety management. The course will go through the process of planning and implementing a SMS by discussing each of the components and elements and showing how they fit in the management system. Students will learn what makes each element important and how to ensure it is efficient and effective.

**MECH 211 MECHANICAL DRAWING I****1.2: 1 cr. E**

Engineering drawings are the language of the engineers and technicians. Therefore, the intent of this course is to equip students with the fundamentals of this unique language, to give them the necessary skills, and to prepare complete, concise, and accurate communications through engineering drawings using AutoCAD.

**MECH 212 INSTRUMENTATION AND EXPERIMENTATION I****0.3: 1 cr. E**

This lab course, the first in a series, is designed to introduce students to instrumentation and experimentation, in order to apply learnt methodologies and techniques to various experimental cases and build lab competencies through practical experiments. Typical experiments are in the areas of Basic Physics, Science of Materials, Engineering Dynamics, Mechanics of Materials, Mechanical Testing, Mechanisms, etc. Special emphasis is exercised on safety within a mechanical engineering laboratory environment, on modern data acquisition techniques as well as data presentation and reporting. The course also helps students develop the ability to work within a team and understand the measurement theory and confidence in measurement.

**MECH 221 ENGINEERING DYNAMICS****3.0: 3 cr. E**

This course covers the concepts of kinematics and kinetics of particles: Force, acceleration, work, energy and momentum. Two-dimensional kinematics and kinetics of rigid bodies, translational and rotational motions.

Pre-requisite: MATH 200

**MECH 222 SCIENCE OF MATERIALS****3.0: 3 cr. E**

Historically, the development and advancement of societies have been intimately tied to the members' ability to produce and manipulate materials to fill their needs. In fact, early civilizations have been designated by the level of their materials' development (Stone Age, Bronze Age, and Iron Age). This course covers introductory and fundamental concepts of materials, their science, their engineering and their different application, with a special focus on metals, ceramics and composites.

Co-requisite: ENGL 101

**MECH 231 CIRCUIT FUNDAMENTALS****3.0: 3 cr. E**

This is an introductory course to electric circuit theory and electronics. Topics covered include fundamental definitions and laws; DC circuit analysis; mesh and nodal analysis; circuit theorems and analysis tools, AC circuit analysis, three-phase circuits, and basic electronic circuits and devices.

Pre-requisite: MATH 211

**MECH 232 THERMODYNAMICS****3.0: 3 cr. E**

This is an introductory course which aims at providing students with theoretical background and the practical knowledge necessary to perform classical engineering analysis of basic open and closed thermodynamic systems.

The course is concerned with:

- the meaning of Thermodynamics and its areas of application,
- the various approaches to the study of Thermodynamics,
- concepts of open and closed Thermodynamic systems,
- the phases and properties of pure substances, states, processes and cycles,
- Work and Heat, laws of mass conservation and energy conservation (1st law of Thermodynamics),

Directional flow of Energy, Heat Engines and Refrigerators, The 2nd law of Thermodynamics,

Efficiency, COP, Carnot Cycles, Irreversibility, Entropy.

### **MECH 233 WORKSHOP TECHNOLOGY**

**0.3: 1 cr. E**

This course constitutes a general introduction to the different activities in a mechanical engineering workshop environment. In addition to safety considerations, topics include metal and sheet metal work including cleaning, sizing, tolerances, marking, scribing, cutting, shaping, filing, drilling, grinding, tapping, joining, welding, riveting, surface finishing, cleaning, storing, etc. Students are given tasks on the above in the form of engineering drawings and need to conclude them using different hand tools, power tools and various other manufacturing machines.

### **MECH 234 MECHANICAL DRAWING II**

**0.3: 1 cr. E**

Engineers often need to provide assembled drawings and to give detailed information related to surface quality and tolerance. In addition, the elements of special machines such as fasteners and gears need to be provided in some engineering drawings. Therefore, the course aims to equip the students with 3D solid mechanical modeling knowhow. Learning this course is based on the ability to use SolidWorks.

Pre-requisite: MECH 211

### **MECH 241 COMPUTATIONAL TECHNIQUES IN MECHANICAL ENGINEERING**

**3.0: 3 cr. E**

This course intends to enhance the students' computational capacities by exposing them to mechanical engineering problems that are best solved or analyzed numerically. Applications from mechanics, thermo-fluids, heat transfer, and design are all considered. Special emphasis is put on pre- and post-processing and the importance of appropriate presentation and animation.

Pre-requisites: MATH 230, CSIS 206, MECH 221

Co-requisites: MECH 243, MATH 270

### **MECH 242 ENGINEERING VIBRATIONS**

**3.0: 3 cr. E**

“Vibration is the branch of engineering that deals with repetitive motion of mechanical systems from machine parts to large structures”. This course covers fundamental principles of mechanical vibrations. The basic concepts of understanding vibrations, analyzing vibrations and predicting the behavior of vibrating systems form the topics of this course.

Pre-requisites: MECH 221, MATH 270

### **MECH 243 FLUID MECHANICS**

**3.0: 3 cr. E**

This course covers fundamental fluid properties; pressure distribution; hydrostatic forces on surfaces; buoyancy; integral relations for a control volume; Reynolds transport theorem, conservation of mass, linear momentum equation, Bernoulli and energy equations; differential relations for fluid flow; fluid acceleration field, mass conservation, linear momentum and energy equations; stream function; vorticity and irrotationality; frictionless irrotational flows, dimensional analysis and similarity; principle of dimensional homogeneity, Pi theorem, non-dimensionalization of the basic equations; modelling and its pitfalls; viscous flow in ducts; Reynolds number regimes, head loss, friction factor, minor or local losses in pipe systems.

Co-requisite: MATH 202

### **MECH 244 INSTRUMENTATION AND EXPERIMENTATION II**

**0.3: 1 cr. E**

This lab course, the second in a series, is designed to consolidate theories gained in other courses taken up to the second year and build lab competencies through practical experiments. Typical experiments are in the areas of Fluid Mechanics, Thermodynamics, Steam Engine and Mechanics of Materials, etc.

Special emphasis is exercised on modern data acquisition techniques as well as data presentation and reporting.

Pre-requisite: MECH 212

**MECH 290 INTRODUCTION TO THE ENGINEERING DESIGN PROCESS**      **0.3: 1 cr. E**

This course is a general introduction to the engineering profession, its main attributes, its design process, and its evolution over time. It emphasizes the engineering design process, its phases, challenges and constraints. The qualities and attributes of a modern day engineer as expected by professional engineering societies and boards; including integrity, professionalism, ethical conduct, care for the environment, as well as the role of the engineer in society are treated.

**MECH 311 MECHANICAL DESIGN I**      **3.0: 3 cr. E**

This course covers concept of stress, and principal stresses. Static failure theories for ductile and brittle materials and their applications. Curved beams, deflection of structural members, analysis and design of pressure vessels, columns, and shafts.

Pre-requisite: CIVE 202

**MECH 314 GAS DYNAMICS**      **3.0: 3 cr. E**

This course is composed of two parts; 1-D Compressible Flows and Boundary Layers:

Part I: Boundary Layer Theory

The Boundary Layer Phenomenon (Observations, Causes, Forms and Effects), Boundary Layer Properties, Fundamental Equations for Viscous Flows (Navier-Stokes Equations & Momentum Integral Equation), The Boundary Layer Approximation, Exact Solution of Laminar Boundary Layers (Blasius), Approximate Solution Laminar Boundary Layers (Von-Karman), Turbulent Boundary Layers, Prandtl's Mixing Length Theory, Solution of Turbulent Boundary Layer.

Part II: Compressible Flows

Tools of the Trade: Revision of some basic concepts from Thermo-Fluids, Speed of Sound and Mach Number, Classification of Flows, Stagnation Properties, Isentropic Flows, Effect of area change on fluid speed & Mach number, Energy Equation for compressible flows, isentropic Flow Relations, Choking, Converging-Diverging Nozzles, Gas Tables, Normal Shock Waves and Operating Characteristics of Converging-Diverging Nozzles, Adiabatic Flow in Constant Area Ducts with Friction (Fanno Flows), Frictionless Flow in Constant Area Ducts with Heat Transfer (Rayleigh Flows).

Pre-requisite: MECH 243

**MECH 315 MECHANICS OF MACHINES**      **3.0: 3 cr. E**

This course provides principles of degrees of freedom of mechanisms. Kinematic analysis of linkages. Cam synthesis, kinematic requirements, and graphical and analytical design. Gear and gear trains. Introduction to synthesis of mechanisms.

Pre-requisite: MATH 230, MECH 221

**MECH 321 HEAT TRANSFER**      **3.0: 3 cr. E**

This course covers fundamental concepts of Conduction, Convection, and Radiation. Students should identify the physical origins of transport processes, perform Heat Transfer Engineering calculations, apply Heat Transfer principles to tackle real-life applications, and perform problems-solving techniques applying appropriate simplifying assumptions.

Co-requisite: MECH 243

**MECH 324 STEAM AND GAS TURBINES**

**3.0: 3 cr. E**

This course concentrates on power producing cycles, it is the second course in Thermodynamics. It is concerned with practical cycle variations leading to efficiency and/or work ratio augmentation. The course starts with a quick review of basic thermodynamics. It then presents different heat engine cycles, the basis of internal combustion engines. It also covers gas turbine units for power generation and aircraft propulsion applications. Steam power plants are also investigated based on Rankine cycle and their different modifications. Finally, combined steam-gas cycles are covered.

Pre-requisite: MECH 232

**MECH 325 INSTRUMENTATION AND EXPERIMENTATION III**

**0.3: 1 cr. E**

This lab course, the third in a series, consolidates theories gained in other courses taken up to the third year and build lab competencies through practical experiments. Typical experiments are in the areas of Gas Dynamics, Heat Transfer, Power and Refrigeration Systems, Automatic Controls, Mechanical Testing, Vibrations, Mechanisms, etc. Special emphasis is exercised on modern data acquisition techniques as well as data presentation and reporting.

Pre-requisite: MECH 244

**MECH 328 BASIC MANUFACTURING**

**3.0: 3 cr. E**

The choice and design of manufacturing processes are key functions for the quality and cost-effectiveness of industrial production. Therefore, knowledge of manufacturing techniques is essential for mechanical engineers. Process designers should also have an understanding of this field because the responsibility for production costs begins with them. The students should be enabled to understand and evaluate work content and to plan simple manufacturing tasks. Knowledge should be conveyed in the following areas: Information about various processes and facilities for the production of individual parts, and mass production, as well as the integration of knowledge from the economic, and materials science fields.

Pre-requisites: MECH 222, MECH 234

Co-requisites: MECH 387

**MECH 387 DESIGN TOOLS IN MECHANICAL AND AERONAUTICAL ENGINEERING 3.0: 3 cr. E**

This computer-based course introduces the Finite Element Method and Computational Fluid Dynamics tools for designing, modelling, simulating, and analyzing practical engineering problems with hands-on experience using commercial software packages used in the industry. It tackles hand sketching, CAD modeling and CAE analysis in both FEM and CFD domains. The students are expected to self-learn certain topics not covered in the lectures. They are also expected to demonstrate their design skills through homework and a final group design project. This course also focuses on communication and teamwork skills through different assessments, especially through the group design project.

Pre-requisites: CIVE 202, MECH 234, MECH 243

**MECH 389 SYSTEM DESIGN**

**3.0: 3 cr. E**

This course, the first in a series of two (MECH 389 and MECH 390), provides mechanical engineering students with some applied practical experience in various design aspects of engineering. In a typical class, 12 to 15 students will start working together on a major system design project that has to be defined, discussed, and agreed upon at the beginning of the semester. They will conduct a literature survey on the subject, analyzing its components, and developing the materials necessary for its execution. The class

will then be subdivided into small groups (3 to 4 students per group) with each group concentrating on a specific component of the global system. By the end of this course, the groups should be ready to integrate their acquired knowledge and their contributed parts into the global system in order to deliver the intended product and report on it by the end of the following semester under MECH 390 course.

Pre-requisites: GENG 221, GENG 222, MECH 290

Co-requisite: MECH 387

### **MECH 390 UNDERGRADUATE DESIGN PROJECT**

**0.3: 1 cr. E**

This course encompasses the Bachelor of Science degree project executed by a group of students, usually 3-4 in a group. It is a capstone project with a culminating design experience that is typically offered in the second semester of the senior year. The students apply an integrated knowledge from their program of study to design a system in order to meet a desired need. This course builds on the System Design course, MECH 389, and allows students the opportunity to execute their design. Student teams revisit and complete the Embodiment and the Detail Design phases of the Engineering Design Process. Students revisit as well identified codes and standards and apply such knowledge to the development of their design. Student teams produce a design solution subject to realistic constraints by taking into consideration public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. Mathematical formulation of the problem is developed as well as a simulation and or a physical prototype is developed. The team-design project is communicated to the public via three means: A Poster, a presentation, and a technical report.

Pre-requisite: MECH 389 or AERO 316

Co-requisite: LISP 200

## **FACULTY OF ENGINEERING GENERAL COURSES**

### **GENG 221 ENGINEERING ETHICS**

**3.0: 3 cr. E**

This course introduces and reinforces the concepts, theories, and practice of engineering ethics and aims at providing basic knowledge of ethics for engineers in different types of work roles. It prepares the engineering students for identifying, taking responsibility for, and finding solutions to potential ethical problems/cases. It provides students with an interactive study of ethical theory and the development of professionalism and helps them think more clearly and deeply about ethical issues of the natures that engineers often face in professional practice, and explore resources, strategies, and options for dealing with such complications. Students review case studies of ethical conflicts in engineering practice. The course also covers engineering codes of ethics and requires students to resolve theoretical situations through the application of ethical codes.

*(A core BS course as of 2023/24 to replace a CSPR XXX course for students who started from year 2022/2023. Previous students can take it as an equivalent of a CSPR XXX course if they have not already taken the required 3 CSPR XXX courses)*

Pre-requisite: CHEN/CIVE/ELCP/MECH/290 (according to discipline), ENGL 203

### **GENG 222 SUSTAINABLE DEVELOPMENT FOR ENGINEERS**

**3.0: 3 cr. E**

This course introduces the fundamental and advanced concepts of sustainable development. It transitions students' understanding of the UN Sustainable Development Goals (SDGs) to focus specifically on the critical role of engineers in achieving these SDGs. Students should then be able to resolve problems by adopting sustainability principles, which should in turn reflect on the students' multidisciplinary design ability to ensure a proper sustainable design process to improve and preserve the quality of life for future generations.

*(A core BS course as of 2023/24 to replace a CSPR XXX course for students who started from year 2022/2023. Previous students can take it as an equivalent of a CSPR XXX course if they have not already taken the required 3 CSPR XXX courses)*

Pre-requisite: CHEN/CIVE/ELCP/MECH/290 (according to discipline), ENGL 203

### **GENG 311 ENGINEERING MANAGEMENT AND ECONOMICS**

**3.0: 3 cr. E**

Engineers with excellent managerial skills and superior economic acumen are needed as leader of the new century engineering world. This course prepares engineers to fulfill their managerial responsibilities and acquire useful economic perspectives. This course is organized to contain two major parts: (I) Functions of engineering management, and (II) Economic fundamentals for engineering managers. Part (I) introduces the basic functions on engineering management such as planning, organizing, leading and controlling, while part (II) covers the fundamentals of engineering economics.
